Symptoms of tongue tie in breastfeeding infants

Infant Symptoms:

- Difficulty latching and/or maintaining a deep latch
- Frequent unlatching and re-latching
- Clicking sounds on the breast
- Leaking/dribbling on the breast, gagging or choking
- Gumming the nipple
- Tucked upper/lower lip when on the breast
- Persistent suck blisters
- Spitting up frequently, Reflux or GERD
- Frustration and/or breast refusal
- Poor weight gain
- Fussiness at breast and in between feedings, Colicky
- Gassiness
- Difficulty bottle-feeding when breastfeeding is being supplemented
- Long or short frequent feedings, baby falls asleep easily at breast
- High or Bubble Palate
- White patch on back of tongue
- Torticollis

Maternal Symptoms:

- Nipple “flattening”/ whitish compression stripes post-breastfeeding or Lipstick shape after feed
- Bleeding, cracked, scabbed or blanched nipples, blebs
- Vasospasms
- Severe nipple pain while breastfeeding
- Plugged milk ducts
- Low milk supply
- Mastitis
- Thrush
- Frustration and anxiety associated with breastfeeding
- Difficulty bonding with the bab

Symptoms of Tongue Tie Related to Bottle Feeding

While these symptoms may be red flags to evaluate for tongue function, some of these may be caused by other factors like a fast flow rate, swallowing difficulties or dysphagia, gastro-esophageal reflux, etc.

- Difficulty latching to the bottle
- Needing to trial SEVERAL bottle systems to find one the child will take
- Gagging when bottle nipple is presented
- Chewing/gumming the bottle nipple
- Clicking sounds while sucking
- Collapsing the nipple
- Pulling away from the bottle frequently
- Dribbling while feeding
- Coughing during feeds
- Prolonged feeding times (over 30 minutes to complete age appropriate volumes)
- Falling asleep/fatigue during bottle feeds
- Gassiness, air intake, frequent spit ups
- Upper lip curling inwards when sealed on the bottle
- Bottom lip moving back and forth, on and off the nipple when feeding

Symptoms of Tongue Tie Related to Breathing/Sleeping Disorders

- Gagging, coughing, or choking during feeding, sleeping, or when swallowing oral secretions
- Breathing through the mouth instead of the nose during feeding, play, or rest
- Excessive drooling
- Persistent nasal congestion and sinus symptoms
- Snoring
- Waking frequently at night
- Obstructive or apneic periods during sleep (Obstructive Sleep Apnea)
